

Customised Specialty Gases and Mixtures
Ultra-pure. Powerful. Efficient.

THE SPECIALIST IN **GASES**

We focus on our strengths
Fast. Accurate. Competitive.

Whether food, medicine, or electronics. Specialty gases are practically omnipresent. They are the invisible helpers when it comes to protection, measurement, or analysis. These gaseous or liquid specialists have become indispensable. They improve the shelf life and product presentation of food products, optimize the illumination of vehicle headlights, or make measurement and calibration technology even more precise.

BUSE knows exactly what matters when it comes to such products – from the properties of the gases to filling the cylinders and necessary accessories.

We're the partner you've been looking for.

Pure Gases

Clean performance. This is because our high purity gases are impressive due to their extraordinary quality and extremely low level of contamination. We therefore have the right degree of purity for every desired application. It's your product when it comes to calibration, process or laboratory gases.

Gas Mixtures

It's the mixture that counts, because this is what determines the quality of a gas mixture. High demands are placed on the product which must be met, particularly when it comes to test, measurement or analysis gases. Otherwise the results obtained are not appropriate. Whether standard mixtures or gases produced according to customer-specific requirements, BUSE mixes them.

Test and calibration gases are often used in very special mixtures. We combine different gases so our customers can achieve the optimum result for the desired application. We distinguish between non-reactive, reactive and very reactive gas mixtures.

Refillable or Non-Refillable

We've got what you are looking for

Excimer Laser Gases

When using an Excimer laser, it is of the utmost importance that it is operated with a high-quality gas mixture. This is the only way to exploit its full performance potential and maximise its service life. The quality of our gas mixtures in combination with delivery reliability makes BUSE a successful partner for you in this sector as well.

Compressed Gas Cylinders

Compact and handy. We have the right cylinder size for every application in stock. This allows you to work with the right gas mixture at very short notice. Simply practical.

We are particularly flexible when it comes to reliable deliveries. At the same time our quality remains extraordinarily stable. That is our philosophy.

Perfectly equipped

You are always well equipped with our extensive range of accessories, whether control valves or pressure regulators. With us you get everything from one source. We would also be pleased to advise you in the field of analytical process control. And if you need something a little bit different in the area of fine tuning, we are also the right people to contact.

Thanks to our intensive cooperation with the Concoa Company, as well as other suppliers, we have quick access to an extensive and high-quality range of products. Whatever equipment you require we have the solution?
